

BÁBEL NYELVI

VETÉLKEDŐ

DÉL 5-8. osztály

2015.04.08 – 04.28.

Csapat neve: _____

Iskola neve: _____

Elérhető pontszám: 60 pont

Elért pontszám:

Beküldési határidő: 2015.04.28.

Eredmények közzététele: 2015.05.12.

Beküldési cím: Abacusan Stúdió, 1193 Budapest Klapka u. 47.

Kérjük, a feladatlapokat **ne** tértivevényesen adják postára.

A borítékra írják rá: „Bábel”!

SOUTH
GRADES 5-8

TOTAL POINTS60 POINTS

YOU SCORED.....POINTS

1.

What are the **two oceanic currents** that meet at the southernmost tip of Africa? ____/2 points

2. What is the name of Capes Town's famous mountain? ____/2 points

3. What are the colours of the flag of the **South African Republic**? Draw it!

Colours: _____/5 point

7. The animals of **Australia** are unique to the continent. The following text is about the **koala**. Answer the questions that follow! _____/10 points

”Though often called the koala "bear," this cuddly animal is not a bear at all; it is a marsupial, or pouched mammal. After giving birth, a female koala carries her baby in her pouch for about six months. When the infant emerges, it rides on its mother's back or clings to her belly, accompanying her everywhere until it is about a year old. Koalas live in eastern Australia, where the eucalyptus trees they love are most plentiful. In fact, they rarely leave these trees, and their sharp claws and opposable digits easily keep them aloft. During the day they doze, tucked into forks or nooks in the trees, sleeping for up to 18 hours. When not asleep a koala feeds on eucalyptus leaves, especially at night. Koalas do not drink much water and they get most of their moisture from these leaves. Each animal eats a tremendous amount for its size—about two and a half pounds (one kilogram) of leaves a day. Koalas even store snacks of leaves in pouches in their cheeks. A special digestive system—a long gut—allows koalas to break down the tough eucalyptus leaves and remain unharmed by their poison. Koalas eat so many of these leaves that they take on a distinctive odor from their oil, reminiscent of cough drops.”

1. What kind of animal is the koala? _____

2. Where are the newly born koala babies for the first half year? _____

3. What do koalas eat? _____

4. Where do they get moisture from? _____

5. Where do they store the leaves? _____

The **Humboldt Penguin** lives by the coasts of South America. Unfortunately, these animals are in danger by humans: _____/15 points

8.

”While this penguin generally doesn’t come into contact with humans, that is their biggest threat. Humans continue to take over lands where these creatures once called their home. Conservation efforts have been made to help those that are injured though so they can live. In captivity they are able to live up to 30 years. This is about a decade more than they would live in the wild.”

Imagine, you are in a conservation project. You must write an article in the local newspaper to donate money to help protect these animals. Write your article in 100 words.
